# A-level GEOGRAPHY

## Paper 1 Physical Geography

Time allowed: 2 hours 30 minutes

### Materials

For this paper you must have:

- the colour insert (enclosed)
- a pencil
- a rubber
- a ruler.

You may use a calculator.

### Instructions

- Use black ink or black ball-point pen.
- Fill in the boxes at the top of this page.
- Answer **all** questions in Section A.
- Answer **either** Question 2 **or** Question 3 **or** Question 4 in Section B.
- Answer **either** Question 5 **or** Question 6 in Section C.
- You must answer the questions in the spaces provided. Do not write outside the box around each page or on blank pages.
- If you need additional extra space for your answer(s), use the lined pages at the end of this book. Write the question number against your answer(s).
- Do all rough work in this book. Cross through any work you do not want to be marked.

### Information

- The marks for questions are shown in brackets.
- The total number of marks available for this paper is 120.

For Examiner's Use	
Section	Mark

C	
<b>TOTAL</b>	

**Section A**

**Water and carbon cycles**

Answer **all** questions in this section.

**0 1 . 1**

Outline the relationship between the water cycle and the carbon cycle in the atmosphere.

**[4 marks]**

---

---

---

---

---

---

---

Turn over ►

Figure 4 shows a landscape in the Namib Desert in southern Africa.

Figure 4

Note: The landforms in this landscape are aligned approximately north-west to south-east and extend from between 16 km to 32 km in length, reaching heights between 60 metres to 240 metres. The sediment source is the Orange River, several kilometres away.

**0 2 . 3** Using **Figure 4** and your own knowledge, assess the relative importance of factors leading to the development of this landscape.

**Figure 6** is a photograph of a landform located in the Humber Estuary, UK.

**Figure 6**

Note: This landform extends about 5 km across the Humber Estuary and is only 50 metres wide at its narrowest point. The Holderness coastline to the north comprises mainly boulder clay, which is unconsolidated material deposited at the end of the last ice age.

0 3 . 3

Using **Figure 6** and your own knowledge, assess the relative importance of factors leading to the development of this landform.

[6 marks]

**Figure 8** is an aerial photograph of a periglacial landscape in northern Canada.

**Figure 8**

Note: There are thousands of small, medium and large scale lakes in this region. This image was taken in early summer and much of the ice has yet to thaw. Local relief and other aspects of geomorphology determine the rate at which ice melts.

0 4 . 3

Using **Figure 8** and your own knowledge, assess the relative importance of factors leading to the development of this landscape.
