**Mark scheme**

June 2020

---

Version: 1.0 Final Mark Scheme

Mark schemes are prepared by the Lead Assessment Writer and considered, together with the relevant questions, by a panel of subject teachers. This mark scheme includes any amendments made at the standardisation events which all associates participate in and is the scheme which was used by them in this examination. The standardisation process ensures that the mark scheme covers the students' responses to questions and that every associate understands and applies it in the same correct way. As preparation for standardisation each associate analyses a number of students' scripts. Alternative answers not already covered by the mark scheme are discussed and legislated for. If, after the standardisation process, associates encounter unusual answers which have not been raised they are required to refer these to the Lead Examiner.

It must be stressed that a mark scheme is a working document, in many cases further developed and expanded on the basis of students' reactions to a particular paper. Assumptions about future mark schemes on the basis of one year's document should be avoided; whilst the guiding principles of assessment remain constant, details will change, depending on the content of a particular examination paper.

Further copies of this mark scheme are available from [aqa.org.uk](http://aqa.org.uk)

## Level of response marking instructions

Level of response mark schemes are broken down into levels, each of which has a descriptor. The descriptor for the level shows the average performance for the level. There are marks in each level.

Before you apply the mark scheme to a student's answer read through the answer and annotate it (as instructed) to show the qualities that are being looked for. You can then apply the mark scheme.

### Step 1 Determine a level

Start at the lowest level of the mark scheme and use it as a ladder to see whether the answer meets the descriptor for that level. The descriptor for the level indicates the different qualities that might be seen in the student's answer for that level. If it meets the lowest level then go to the next one and decide if it meets this level, and so on, until you have a match between the level descriptor and the answer. With practice and familiarity you will find that for better answers you will be able to quickly skip through the lower levels of the mark scheme.

When assigning a level you should look at the overall quality of the answer and not look to pick holes in small and specific parts of the answer where the student has not performed quite as well as the rest. If the answer covers different aspects of different levels of the mark scheme you should use a best fit approach for defining the level and then use the variability of the response to help decide the mark within the level, ie if the response is predominantly level 3 with a small amount of level 4 material it would be placed in level 3 but be awarded a mark near the top of the level because of the level 4 content.

### Step 2 Determine a mark

Once you have assigned a level you need to decide on the mark. The descriptors on how to allocate marks can help with this. The exemplar materials used during standardisation will help. There will be an answer in the standardising materials which will correspond with each level of the mark scheme. This answer will have been awarded a mark by the Lead Examiner. You can compare the student's answer with the example to determine if it is the same standard, better or worse than the example. You can then use this to allocate a mark for the answer based on the Lead Examiner's mark on the example.

You may well need to read back through the answer as you apply the mark scheme to clarify points and assure yourself that the level and the mark are appropriate.

Indicative content in the mark scheme is provided as a guide for examiners. It is not intended to be exhaustive and you must credit other valid points. Students do not have to cover all of the points mentioned in the Indicative content to reach the highest level of the mark scheme.

An answer which contains nothing of relevance to the question must be awarded no marks.

**KEY LIST**

<b>1</b>	B – (Interest rates)	<b>6</b>	A – (6.8%)
<b>2</b>	D – (Value of imports is less than the value of exports)	<b>7</b>	B – (Central bank)
<b>3</b>	C – (Seasonal)	<b>8</b>	A – (Increased UK exports)
<b>4</b>	B – (Lower unemployment)	<b>9</b>	B – (Lower exchange rate)
<b>5</b>	A – (Decrease/Decrease)	<b>10</b>	C – (Increase/Decrease)

<p><b>Indicative content:</b></p> <p><i>Arguments in favour:</i></p> <ul style="list-style-type: none"> <li>• Should be able to reduce unemployment. Supply-side policies should allow unemployment to be lowered – especially those types of unemployment that are not related to spending within the economy.</li> <li>• Lower unemployment is one of the principal economic objectives of the government. This is because of the desirable consequences of lower unemployment – rising living standards, lower welfare spending needed, higher tax revenue, etc.</li> <li>• Monetary policy/Fiscal policy may only work on cyclical unemployment and other policies are necessary to further reduce unemployment.</li> <li>• Supply-side policies do not conflict with many other policy objectives. They allow unemployment to fall without leading to rises in demand-pull inflation.</li> </ul> <p><i>Arguments against:</i></p> <ul style="list-style-type: none"> <li>• Some unemployment may be cyclical and best solved through other policies. Cyclical unemployment cannot be reduced through supply-side policies so that would make them no use for this type of unemployment.</li> <li>• Supply-side policies can lead to lower incomes for those on low paid jobs. These policies often take away the rights of workers by making labour markets more flexible. As a result, workers will find it harder to bargain for higher wages. The minimum wage would probably not rise as quickly as part of a supply-side policy (though this is debatable).</li> <li>• Working conditions may be worsened. Supply-side policies often take away the protection given to workers in terms of contract of employment, permanent contracts, etc. As a result, workers will suffer.</li> <li>• Some supply-side policies are expensive. Improvements to education and infrastructure are both supply-side policies but are also very expensive to implement.</li> </ul>			

		<ul style="list-style-type: none"> <li>• They take a long time to work. Often, they take many years to fully implement and for them to work.</li> </ul> <p>Possible issues for evaluation include:</p> <ul style="list-style-type: none"> <li>• Improvements to infrastructure and education will not negatively impact on too many people – but are expensive.</li> <li>• Although there are negative effects on workers of supply-side policies, there is clear evidence that it does lead to a lower level of unemployment.</li> <li>• It is not easy to decide which is better – low paid jobs that are easy to find, or well paid jobs that are scarce.</li> <li>• There are always winners and losers.</li> <li>• Supply-side policies have fewer trade-offs and conflicts with other policies.</li> <li>• A combination of economic policies – supply-side with monetary and fiscal policy will be needed to achieve all the government’s economic objectives.</li> </ul> <p><b>Note:</b> This indicative content is not exhaustive, other creditworthy responses should be awarded marks as appropriate.</p>
