# GCSE STATISTICS

Paper 1

Time allowed: 1 hour 45 minutes

## Materials

For this paper you must have:

a calculator

Higher tier

· mathematical instruments.

#### Instructions

- Use black ink or black ball-point pen. Draw diagrams in pencil.
- Fill in the boxes at the top of this page.
- Answer all questions.
- You must answer the questions in the spaces provided. Do not write outside the box around each page or on blank pages.
- If you need extra space for your answer(s), use the lined pages at the end of this book. Write the question number against your answer(s).
- Do all rough work in this book. Cross out any work you do not want to be marked.

### Information

- The marks for the questions are shown in brackets.
- The maximum mark for this paper is 80.
- You may ask for more answer paper and graph paper. These must be tagged securely to this answer booklet.

## Answer all questions in the spaces provided.

1 Two fair spinners, each numbered 1 to 8, are spun.

The numbers they land on are added up.

What is the probability the total is 16?

[1 mark]

 $\frac{1}{4}$ 

 $\frac{1}{16}$ 

 $\frac{1}{32}$

Circle the letter of the statement for the graph which is **definitely** true.

[1 mark]

- **A** 2005 had the highest % of 16 to 24-year-olds drinking since 2000.
- **B** The % of 16 to 24-year-olds drinking has fallen every year from 2005.
- **C** Most 16 to 24-year-olds in 2017 did not drink alcohol in the last week.
- **D** Most 16 to 24-year-olds in 2017 do not drink alcohol at all.

8 Rachel and Mitch own a café.

They want to decide whether more staff are needed at certain times.

On one day, Rachel records how long customers wait to be served at specific times **after 9am**.

8 (a) Write down the independent and dependent variables.

[2 marks]

Independent variable

Dependent variable

8 (b) The scatter diagram shows the results for 25 customers Rachel sampled.

8 (b) (i) Which of these is a possible equation for a regression line for the data shown?

Circle your answer.

[1 mark]

$$y = -0.06 + 0.689x$$

$$y = -0.06 + 0.023x$$

$$y = 4.8 - 0.689x$$

$$y = 4.8 - 0.023x$$

| 8 (b) (ii  | Here is some information about the results sampled for later in the day.   |           |
|------------|--|-----------|
|            | <ul> <li>After 12.30pm but before 1.30pm all five customers sampled waited between<br/>4 and 5 minutes.</li> </ul> | n         |
|            | • From 1.30pm, the six results showed a strong negative correlation.   |           |
|            | On the scatter diagram, show possible results for these additional 11 sampled customers.                           |           |
|            |  | [2 marks] |
| 8 (b) (iii | ) Mitch decides to employ an extra person for a two-hour time period.  |           |
|            | Which time period would you suggest?   | [1 mark]  |
|            | Answer to  |           |
| 8 (c)      | Lucy is a statistician who visits the café.  |           |
|            | She identifies a problem with Rachel's data collection strategy and offers a sol                                   | ution.    |
|            | Describe the problem and the solution Lucy may have suggested.   | [2 marks] |

Turn over for the next question

| 10     | Fifteen people apply to take part in an 'IronMan' triathlon.  Before they can compete they must prove they are fit enough to attempt the course.  Angelina collects data on each competitor's,  • age  • blood pressure  • resting heart rate.  |
|--------|---|
| 10 (a) | Angelina thinks that finishing position in the triathlon (1st, 2nd, 3rd, etc) and resting heart rate will show positive correlation.  Write a hypothesis for her to investigate.  [1 mark]  |
| 10 (b) | Once the race is run, Angelina notes the order in which the competitors finished, from 1st to 15th position. She also ranks the resting heart rate data from lowest to highest. She calculates that the value of $\sum d^2 = 60$ , where $d$ is the difference in the ranks of the finishing position and the resting heart rates. Show that the value of Spearman's Rank Correlation Coefficient (SRCC) is 0.89 (to 2 decimal places). Use SRCC = $1 - \frac{6\sum d^2}{n(n^2 - 1)}$ [3 marks] |
|        |   |

| 10 (c) | Write a possible conclusion to your hypothesis in <b>part (a)</b> . | [1 mark] | Do not write<br>outside the<br>box |
|--------|---|----------|------------------------------------|
|        |   | [        |                                    |

| 11 |     |      | A large forest contains an unknown number of squirrels.  Fynn is asked to estimate the number of squirrels in the forest.  He catches 50 and tags them before releasing them back into the forest.  Two weeks later, he catches 40 more squirrels and finds that 11 have a tag. |           |
|----|-----|------|---|-----------|
| 11 | (a) | (i)  | Give <b>one</b> reason why Fynn waits two weeks before catching the 40 squirrels.   | [1 mark]  |
| 11 | (a) | (ii) | Give <b>one</b> reason why Fynn doesn't wait a lot longer than two weeks.   | [1 mark]  |
| 11 | (b) |      | Calculate an estimate of the number of squirrels in the forest.   | [3 marks] |
|    |     |      |   |           |
|    |     |      | Answer  |           |

In a factory, three different machines, **A**, **B** and **C**, put crisps into bags.

Filled bags are labelled as having a mass of 25g.

Every two days, Luka, the quality control manager, obtains a sample of filled bags from each machine and calculates the sample mean.

**12 (a)** The control chart for 10 consecutive large samples for **Machine A** is shown below, together with warning and action limits.

What should Luka do, if anything, with Machine A, based on this chart?

[1 mark]

12 (b) The control chart for 10 consecutive large samples for **Machine B** is shown below, together with warning and action limits.

What should Luka do, if anything, with Machine B, based on this chart?

[1 mark]

12 (c) Ten large samples for **Machine C** show it to be working normally.

Complete a possible control chart for **Machine C** on the graph below.

Maisy has her house valued each year.

The table shows the percentage increase in its value, written as a multiplier, over each of the last 5 years.

| Year       | 2016  | 2017  | 2018  | 2019  | 2020  |
|------------|-------|-------|-------|-------|-------|
| Multiplier | 1.067 | 1.013 | 1.008 | 1.005 | 1.126 |

**13 (a)** Maisy wants to know the average percentage increase over the 5 years.

She works out the arithmetic mean.

$$\frac{6.7+1.3+0.8+0.5+12.6}{5}=4.4\%$$

Average percentage increase = 4.4% to one decimal place.

13 (a) (i) Maisy has used the wrong method.

| Name the measure she should have calculated | Name th | e measure | she | should | have | calculated |
|---|---------|-----------|-----|--------|------|------------|
|---|---------|-----------|-----|--------|------|------------|

[1 mark]

13 (a) (ii) Show that the correct average percentage increase is 4.3% to one decimal place.

13 (b) A new housing estate with 80 houses is built near Maisy's house. She sees this pie chart in her local paper showing the types of houses in the estate. Key: Four-bedroom houses Three-bedroom houses Two-bedroom houses Bungalows Vicky buys a bungalow on this new estate. What proportion of the houses on this new estate are bungalows? [2 marks] Answer \_\_\_\_

| 13 (c) | Maisy lives on an older housing estate.  |  |
|--------|--|--|
|        | On <b>Maisy's estate</b> there are,  |  |
|        | 60 four-bedroom houses   |  |
|        | • 38 three-bedroom houses  |  |
|        | • 22 two-bedroom houses  |  |
|        | • 40 bungalows.  |  |
|        | In the space below, draw a fully labelled comparative (proportional) pie chart to represent the types of houses on Maisy's estate. |  |
